PROFILE

Software engineer with 9+ years of hands-on product development, currently focused on **Backend development, DevOps (CI/CD)** and **AI-driven systems**. I build backend services in Python and Node.js, LLM chatbots and AI agents, RAG pipelines and n8n/Dify automations — all shipped in Docker with CI/CD pipelines that automate testing and deployment. Comfortable building a system end-to-end: application code, database, Linux server and network infrastructure.

CORE SKILLS

Python & ERP — Odoo 16/17/18 (ORM, XML/QWeb views, cron jobs, custom modules), API integrations.

AI & Automation — LLM API integration, AI agents, RAG, chatbots, n8n (self-hosted, custom nodes), Dify, prompt engineering.

Backend — Node.js/TypeScript (NestJS, Express, Strapi), PHP (Laravel, Symfony), REST, GraphQL, WebSocket.

E-commerce & Payments — Magento 1 & 2, WordPress/WooCommerce, Shopify apps and the **Shopify Admin API** (product, customer and order sync), payment gateway & shipping integrations.

DevOps & Infrastructure — Docker & Docker Compose (every service containerised), GitHub Actions, GitLab CI, Jenkins, Linux (Ubuntu/CentOS), Proxmox VE (VM provisioning, backups), NGINX, Traefik, SSL automation, Mikrotik routing, VLAN, multi-WAN.

Data — PostgreSQL, MySQL/MariaDB, MongoDB, Redis, SQLite.

Frontend — React, Vue/Nuxt, React Native.

*Also worked with: **C#/.NET** (coursework during college) and **C/C++** (ESP8266/ESP32 firmware) — working knowledge, not my primary languages.*

EXPERIENCE

FGC Techlution — Full Stack Developer + AI Agent

02/2021 – Present

- Develop and maintain **internal Odoo 16/17/18 addons** used daily by company staff: custom models, QWeb views, access rights, scheduled actions and reporting.
- Built the **Odoo ↔ ClickUp time-reporting integration**, letting employees log working time in Odoo and pushing it to ClickUp tasks automatically — removing duplicate manual reporting.
- Deliver **AI solutions** for internal and customer use: chatbots, AI agents, self-hosted n8n workflows and Dify applications, integrated with LLM APIs. This is the period where my AI work began and became a core part of the job.
- Maintain **e-commerce sites for Australian clients** on Magento and WooCommerce: build themes, payment and shipping plugins.
- Built **Shopify API integrations in live production**: sync products, customers and orders between Shopify and internal systems using the Admin REST API and webhooks, with rate-limit handling and retry on failure.
- **Train and mentor interns and junior trainees.**

NTQ Solution — Backend Developer

09/2020 – 02/2021 · Ha Noi, Vietnam

- Maintained and extended a **Rocket.Chat**-based communication platform, including custom backend features and builds for macOS, Windows and mobile.
- Coached junior developers on code quality and backend practices.

FGC Techlution — Web Developer

05/2017 – 07/2020

- Built **10+ WordPress, Magento 1/2 and Shopify extensions** — payment gateways and shipping/logistics integrations — for an Australian B2B e-commerce platform.
- Developed and maintained the platform's backend in **PHP (Laravel)** and **Node.js**.
- Managed server lifecycle: VPS provisioning (CentOS/Ubuntu), NGINX/Traefik reverse proxy, SSL automation and load balancing.
- Set up the team's code review process and coding conventions.

SELECTED PROJECTS

AI Chatbot (RAG): Customs & HS-Code Assistant — *Python, n8n, PGvector/Qdrant, OCR*

Answers two kinds of import–export questions: which **HS code** applies to a product, and what the **legal documents** say. Regulations are crawled, scanned PDFs go through **OCR**, and text is embedded into a **vector database (PGvector / Qdrant)**. Built on **n8n** with a **classification step routing each query to the right AI agent** rather than one generic prompt.

Odoo ↔ ClickUp Time Reporting — *Python, Odoo 16/17/18*

Internal addon that connects Odoo timesheets to ClickUp. Employees report time inside Odoo; the module maps Odoo users to ClickUp members, pushes time entries through the ClickUp REST API, and retries failed syncs on a cron schedule. Built with the Odoo ORM, QWeb views, access-right rules and structured logging.

Shopify ↔ internal system: product, customer and order sync — *Node.js, Shopify Admin API, PostgreSQL*

Live production integration: consumes Shopify webhooks for new products and orders, writes normalised data into internal systems, and pushes stock levels and order status back. Handles Admin API **rate limits**, retry with backoff and reconciliation logs.

giaoanxanh.com — *Strapi (Node.js), Nuxt.js, Docker*

Document-sharing platform for teachers and students: **Strapi** backend, **Nuxt.js** frontend, and a **microservice converting DOCX to PDF** so lesson plans can be read in the browser. All services run in Docker.

Open-source packages

- n8n-nodes-synology — n8n community node for Synology NAS (npm).
- fgct/securepay-api — SecurePay payment gateway API client (Packagist).

OPEN SOURCE CONTRIBUTIONS

- **n8n** — #15437: added the missing filters (name, projectId, pinned data, limit, cursor) to the node `Get Many` operation.
- **Dify** — #21582: model-provider validation API in core.
- **Dify official plugins** — #1186: implemented the **Gemini text embeddings** plugin.
- **Other merged fixes** — OmniRoute (webhook wizard), db-backup (PostgreSQL restore), libreoffice-convert (snap binary), Nuxt Google AdSense (runtime config), Fatzebra PHP-Library (payment SDK).

EDUCATION

FPT Polytechnic College of Ha Noi

2013 – 2016 · Software Applications · **Very Good**

Coursework included C#/.NET and object-oriented programming, databases and web development.

LANGUAGES

Vietnamese — native · **English** — reads technical documentation confidently, good at written communication (chat/email)
